

THERMAGE

FAQ

WHAT IS THERMAGE?

A FDA approved radio frequency machine which is non-invasive RF therapy that can help smooth, tighten and contour your face for an overall younger-looking appearance.

HOW DOES MICROBLADING WORK?

Non-invasive technology which sends Radio frequency to your collagen layer, during the process, heat is sent as a wavelength to that layer and wake up and rebuild collagen layers. Its a non-ablative process and therefore doesn't have any downtime.

WHAT HAPPENS DURING/AFTER YOUR APPOINTMENT?

DURING YOUR APPOINTMENT:

1. Your skin is carefully analyzed and a map would be given to you by our thermage specialist to go over how we would like to contour your face. 15min
2. The treated area would be then prepped to optimize the skin hydration level. This includes the topical numbing as needed. 20min
3. Thermage procedure: The specialist would perform the treatment on you based on the customized map. A cooling gel is applied during each rep (like a stamp). The specialist also constantly checks in with you to ensure your comfort level. We will also walk you through the after care and answer all the questions you need about your skin care regime. 80min
4. Post care: your skin will be thoroughly hydrated with the skin repair mask infused with glutathione and Vitamin C and niacinamide as well as our repair gel to optimize the thermage result. Your skin will be under professional LED light for about 15-20min.

AFTER THE PROCEDURE:

Please refer to [here](#) for the post care instruction. A copy of the post care instruction will be sent to you via text or email as well.

DOES DIFFERENT SKIN TYPES REACT DIFFERENTLY TO THERMAGE?

YES, results are unique to each client. Right after the procedure, you will feel tight and lifted. Visually, your skin would look lifted and tight for about 10%-20%. Over time, as collagen production is exponentially produced, you would see the optimal level at about 4-6 months.

HOW LONG DOES THE PROCEDURE TAKE: 2HRS

Before and after pictures, Numbing, mapping to contour your face, the actual process of thermage, and the fine tuning of the finished process.

DOES THERMAGE HURT?

If thermage is not done properly or a clinic is not specialized in thermage, thermage could be very uncomfortable. Af process generates a lot of heat and if the practitioner doesn't choose the correct level for YOUR tissue health and just a default setting, it could be very painful. At DERM boss, we are specialized in thermage, it means we know what setting is perfect for your tissue and therefore our patients would experience from a minimal pain (level 1) to none.

HOW MUCH DOES MICROBLADING COST?

Please refer to our pricing [page](#)

DO YOU OFFER IN-PERSON CONSULTATION?

Due to the high volume of clientele we offer same day consultations that are included in the deposited fee. Any concerns, or questions can also be addressed by emailing a clear photo of your face at 90 degree, 2 sides at 45 degree from the front to info@dermbossLA.com for a free online consultation.

WHEN WILL I COME BACK? HOW LONG IT LASTS?

Thermage is a tissue booster treatment and therefore, your tissue would become better over time. Thermage is the best tool to slow down the aging process.

WILL MY TISSUE BECOME WORSE IF I STOP DOING THERMAGE?

Thermage is a booster to help slow down the aging process so if you stop, your tissue will continue its natural aging process over time.

PARKING:

Right behind the building, please text us once you arrive in the parking lot and if you have any question
